

ABSTRACT

PROJECT TITLE- ONLINE VOTING SYSTEM

The word “vote” means to choose from a list, to elect or to determine. The main goal of voting (in a scenario involving the citizens of a given country) is to come up with leaders of the people’s choice.

Most countries, India not an exception have problems when it comes to voting. Some of the problems include rigging votes during election, insecure or inaccessible polling stations, inadequate polling materials, inexperienced personnel and the need to be physically present at the time of voting.

This online voting system seeks to address the above issues. It should be noted that with this system in place, the users, citizens in this case shall be given ample time during the voting period. They shall also be trained on how to vote online before the election time.
